

Inspira – platform for secure electronic student examination

Inspira is the leader on the international market of solutions enabling secure electronic student examination. In Sweden and in Norway, Inspira is used during the national high school final exams, taken each year by over 250 thousand students.

At universities, Inspira enables comprehensive management of the student examination process, regardless of the type or the size of the university. Inspira currently operates in 24 countries all over the world and is used by some of the world's best universities, including the Cambridge University in the United Kingdom.

PCG Academia is the leading provider of consulting and technological solutions for universities in Poland. The comprehensive IT ecosystem for universities which we offer is based on the Uczelnia 10 studies handling system and on innovative solutions provided by our Polish and foreign partners. Partners in Progress is the exclusive commercial partner of the Inspira company in Poland and it offers comprehensive support in the process of implementation and operation, as well as technical assistance, to the system users in our country.

DISTINCTIVE FEATURES OF THE SYSTEM

Browser blockade to hinder cheating during the examination

The "use your own computer" model, scaling the possibilities of using the system

Module for monitoring the activity of students taking the exam

Possibility of conducting each element of the examination process in the paper form

Comprehensive handling of the examination process

Inspira is provided as an online service and its implementation consists only in the configuration of the system based on the university's needs, user registration and integration with the university's IT solutions, i.e. dean's office system, anti-plagiarism system or single sign-on system (SSO).

Examination planning

Advanced system configuration possibilities with regard to examination mode, question display (sequential or random), support for special needs students (extra time, spell checking) or anti-plagiarism control.

Question creation

14 different variants of question creation, including multiple choice questions, descriptive questions, mathematical and chemical formulas, code compilation and a possibility to record oral answers. The system enables question bank creation and sharing.

User allocation

Possibility to configure the roles and authorizations of system administrators, for the teachers creating and evaluating questions and for the persons supervising the course of the examination and supporting the students' work.

Student allocation

Possibility of importing students' data from the dean's office system and of exporting the exam results obtained in the Inspira system back to the dean's office system.

Examination

Examinations may be held in the electronic, paper or combined form, on the university's or the students' computers, depending on the needs and the possibilities.

Examination monitoring

The control panel informs the teachers and administrators of the students' ongoing progress and of their activity in the system during the examination.

Examination grading

Automatic or manual examination grading mode, enabling the dispatch of comments and feedback to the student via the system.

Results analysis

Automatically generated reports and analyses presenting the distribution of the students' grades and the statistics relative to the examination.

System presentation

There are many ways to discover the functionality of the Inspira system before making the final decision on the purchase of the software:

- Presentation at the premises of the university or through a videoconference system
- Free, temporary demo access to the system for 3 users
- Paid pilot implementation at the university for an agreed group of users
